Experience

Amazon Web Services (AWS) Aug 2024 – Present
Cloud Consultant – Professional Services (DevOps/MLOps) Hyderabad, India

- **Lead DevOps Consultant – RWS (Feb 2026 – Present):** Replaced a legacy account-vending pipeline with Terraform Cloud automation (OIDC) for a data-centre exit and a second landing zone, cutting per-account setup from 3+ days to under 4 hours (~90% reduction). Codified Organizations OUs with Control Tower baselines, SCPs, tag policies, and least-privilege account baselines with IAM Identity Center, AWS Backup, and SSM Patch Manager in every workload account: 4,000+ resources across 20+ Terraform Cloud workspaces, none failing. Applied every change in a sandbox mirror first through the same least-privilege role. Built self-service network onboarding on two Transit Gateway hubs: route table within 15 minutes, firewall access by tag in about a minute. Used Kiro and Claude Code for specs and design documentation.
- **DevOps Consultant – State Street (Oct 2024 – Aug 2025):** Built Terraform for about 10 AWS services with automated tests (tftest + PyTest) on the regulated landing zone team, part of the path that opened 38+ services to application teams. Designed Amazon Detective enablement via an AFT customization, with organization-wide auto-enable in Terraform. Worked on the security solution behind 1,000+ preventative CCMv4.0 controls (team result). Project closed with a **10/10 CSAT**.
- **DevOps Consultant – DTCC (Aug 2025 – Nov 2025):** Modernized legacy Terraform into cloud-native IaC patterns on high-sensitivity financial workloads – refactored monoliths into reusable modules, added remote state with S3 native locking, and hardened pipelines with policy-as-code checks. Used Amazon Q to accelerate code analysis and migration assessments across multiple workstreams.
- **MLOps Pipeline (SME Program, Jun – Aug 2025):** Built end-to-end SageMaker pipeline for medical-image classification with blue-green endpoint deployment, auto-scaling, and drift detection – provisioned via Terraform + CodePipeline with automated rollback on canary failure. Generalized and published by AWS as an official open-source sample (aws-samples, MIT-0).
- **Internal Impact:** Published a second AWS sample, Terraform for AWS Organizations governance on Control Tower (aws-samples, MIT-0), covering all six policy types, Control Tower controls, and delegated admin for 15 services. Published APG pattern *Secure PR Previews and Approval-Gated Releases for Amplify Gen 2 with GitHub* (plus 2 more peer-reviewed in the publication pipeline). Delivered 2 org-wide tech talks on Terraform module testing and GitOps pipeline gating. 5x TFC Ambassador (AI/ML, NGDE Graduated, CloudOps – AWS DevOps Agent, Agentic AI, Serverless). MLOps SME Program Graduate. Associate Speaker Certified.
