Experience

Amazon Web Services (AWS) Aug 2024 – Present
ProServe (Cloud Consultant) - DevOps/MLOps Hyderabad, India

- **Lead DevOps Consultant – RWS (Feb 2026 – Present):** Built the AWS foundation for a data-centre exit and a second landing zone entirely in Terraform, replacing a legacy account-vending pipeline: Organizations OUs with Control Tower baselines, SCPs, tag policies, and least-privilege account baselines (IMDSv2, EBS encryption, no default VPC). Cut per-account setup from 3+ days to under 4 hours (~90%); 4,000+ resources across 20+ Terraform Cloud workspaces, none failing. Delivered two Transit Gateway hubs with Network Firewall inspection and VPN/Direct Connect, plus self-service onboarding that gives each new workload its route table within 15 minutes. Used Kiro and Claude Code for specs and design documentation.
- **DevOps Consultant – State Street (Oct 2024 – Aug 2025):** Built Terraform for about 10 AWS services with automated tests (tftest + PyTest) on the regulated landing zone team, part of the path that opened 38+ services to application teams. Designed Amazon Detective enablement via an AFT customization, with organization-wide auto-enable in Terraform. Worked on the security solution behind 1,000+ preventative CCMv4.0 controls (team result). Project closed with a 10/10 CSAT.
- **DevOps Consultant – DTCC (Aug 2025 – Nov 2025):** Modernized legacy Terraform to cloud-native IaC patterns on high-sensitivity financial workloads. Used Amazon Q to accelerate code analysis and migration assessments across the estate.
- **MLOps Pipeline (SME Program, Jun – Aug 2025):** Built a SageMaker medical-image-classification pipeline with blue-green endpoint deployment, auto-scaling, and drift detection – provisioned via Terraform + CodePipeline, fronted by CloudFront with API Gateway + Lambda inference. Generalized and published by AWS as an official open-source sample (aws-samples, MIT-0).
- **Internal Impact:** Published a second AWS sample, Terraform for AWS Organizations governance on Control Tower (aws-samples, MIT-0), covering six policy types, Control Tower controls, and delegated admin for 15 services. Published APG pattern "Secure PR Previews and Approval-Gated Releases for Amplify Gen 2 with GitHub" (plus 2 more peer-reviewed in publication pipeline). MLOps SME Program Graduate. 5x TFC Ambassador (AI/ML, NGDE Graduated, CloudOps, Agentic AI, Serverless). Delivered 2 org-wide tech talks on Terraform testing (2025) and GitOps pipeline gating (2026). Associate Speaker Certified (2026).

Amazon Web Services (AWS) Mar 2024 – Jul 2024
Associate Professional Services – DevOps (Internship) Hyderabad, India

- Migrated an on-premises application to AWS ECS with blue-green deployment via Terraform, CodePipeline, and CodeDeploy – enabling zero-downtime releases. Instrumented X-Ray and CloudWatch distributed tracing for production observability.

Ikarus-3D May 2023 – Jul 2023
Software Developer Associate (Internship) Mohali, India

- Containerized a production application on AWS ECS/ECR with GitHub Actions CI/CD, and deployed SonarQube on EC2 + RDS to embed continuous code-quality analysis into the delivery pipeline.
